Build 3 RAMS free · From £29/month

Stop fighting templates. Start shipping documents.

Most teams still juggle Word templates, shared drives and signed PDFs scanned on phones. AI 'RAMS generators' spit out generic prose with no structure, no sign-off and no link to what's happening on site. Riskora replaces all of it with one connected system.

Ship in minutes, not weekends

Guided structured builder takes you preset → details → hazards → method → review. No blank pages, no template wrangling, no AI prose to clean up.

Real hazard libraries

Curated, industry-mapped hazards and controls — built for construction, archaeology, utilities, landscaping and more. Not generated. Not generic.

Sign-off built in

Reviewer assignment, timestamped approvals and document locking. Once signed off, edits create a new revision automatically.

On-site QR sign-on

Operatives scan a QR code and sign on their phone — no app install. Signatures are anchored to the exact document version they signed against.

Live site context

Site weather and nearest hospital auto-pulled into every document. Emergency plan section completes itself.

Audit trail you can hand over

Tamper-evident evidence pack ready for any principal contractor request. Version history on every edit, every signature, every briefing.

HOW IT WORKS

Build. Approve. Prove.

Three connected stages — one platform. Every document is auditable from creation to on-site signature.

01

BUILD

Guided structured builder. No blank pages, no template wrangling.

- + Industry presets with mapped hazard libraries
- + Live site weather & nearest hospital auto-pulled
- + Region-aware: UK RAMS, IE RAMS, US JHA, AU SWMS, CA FLHA
- + PDF & Word export, with bulk export per project
- + Editable method statements — you stay in control

02

APPROVE

Built-in review and sign-off workflow. Signed-off docs are locked.

- + Reviewer assignment & timestamped approvals
- + Automatic version history on every edit
- + Locked documents; edits create a new revision
- + Re-review reminders before docs expire
- + Role-based access for managers, ops, admins

03

PROVE

Riskora goes onto site with you. Operatives sign on their phone.

- + QR sign-on — no app install for operatives
- + Toolbox talks & site briefings with attendance
- + Tamper-evident audit trail
- + Hand-over-ready evidence packs
- + Version-anchored signatures

THE OUTCOME

Faster RAMS. Cleaner sign-off. Zero blank pages.

Teams using Riskora produce their first audit-ready RAMS in under 5 minutes — and never lose a signature, version or briefing again. One platform replaces templates, sign-on sheets, version trackers and PDF folders.

THE DIFFERENCE

Why Riskora isn't 'just another RAMS generator'.

	Generic AI RAMS tools	Riskora
Document structure	Free-form AI prose	Structured: scope, hazards, matrix, method
Hazard library	Made up by the model	Curated, industry-mapped libraries
Site context	None	Live weather + nearest hospital auto-pulled
Sign-off & approvals	Not included	Built-in reviewer workflow with locking
On-site signatures	Not supported	QR sign-on for operatives, version-anchored
Version control	Overwrite the file	Automatic revisions, full edit history
Toolbox talks & briefings	Separate tool	Native — same hazard data flows through
Audit trail	None	Tamper-evident, hand-over ready
Re-validation	You remember it	Automated expiry reminders

BUILT FOR REAL PROJECTS

Industry presets that understand your work.

Riskora ships with curated presets for **construction, archaeology & heritage, utilities, general builders, landscaping** and more. Each preset comes with its own hazard library, control measures and method statement scaffolding — so the document you build reflects what's actually happening on site, not a generic safety essay.

THE FULL TOOLKIT

Everything in one platform.

Structured RAMS builder

Guided flow with industry presets, hazard libraries and editable method statements.

Toolbox talks

Native talk builder with attendance capture and hazard-linked content.

Site briefings

Pre-start briefings with QR-based operative sign-on.

QR sign-on

Operatives scan, sign on their phone — no app install required.

Version history

Every edit tracked. Locked documents create new revisions automatically.

Approval workflows

Reviewer assignment, timestamped sign-off, expiry reminders.

Live site weather

Conditions auto-pulled into every document.

Nearest hospital lookup

Emergency plan section completed automatically.

Multi-region

UK RAMS · IE RAMS · US JHA · AU SWMS · CA FLHA schemas.

PDF & Word export

Branded, client-ready exports. Bulk export per project.

Multi-org & RBAC

Roles for safety managers, ops, admins. SSO-ready for enterprise.

Audit trail

Tamper-evident evidence pack you can hand to a principal contractor.
