

WE'RE HERE FOR YOU.

AROUND YOUR CLOCK, AROUND YOUR WORLD®

Anywhere, Anytime... DXB specialise in designing bespoke solutions for your fluid handling requirements.

WORLD CLASS ECO-FRIENDLY PRODUCTS

Like you, we care about the environment, which is why our efficient pumpsets use the latest Stage 5 emission compliant engines as standard.

REAL TIME ASSET CONTROL

Downtime isn't an option. All our pumpsets can be remotely monitored for ultimate asset control and performance.

WARRANTY & AFTERCARE

Our aftermarket team are here to support your business for the life of the pumpset. All products come with a market leading warranty period for absolute peace of mind.

YOUR TRUSTED PARTNER

Simply put, our customers support us and we support them. We're partners! That is why we don't walk away once the pumpset is delivered.

HIGH VOLUME & FISH FRIENDLY PUMPS

HIGH VOLUME & FISH FRIENDLY PUMPS

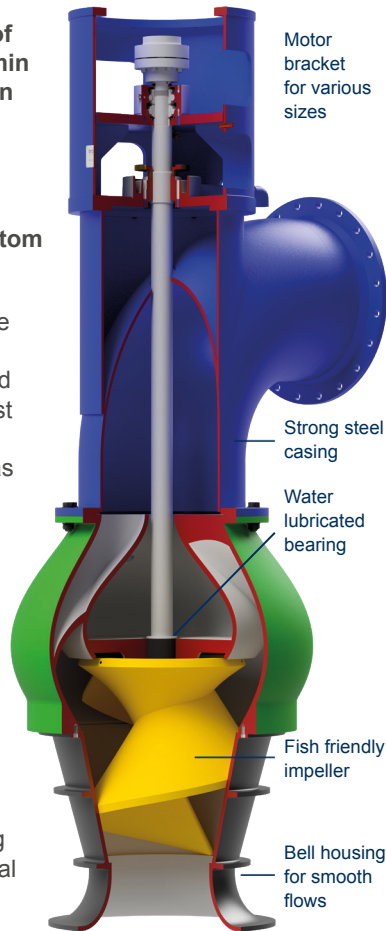

DXB PUMP & POWER HAS EXTENDED ITS PRODUCT PORTFOLIO TO THE WATER MANAGEMENT INDUSTRY, BY RECENTLY INTRODUCING A RANGE OF ULTRA-HIGH FLOW AND FISH FRIENDLY PUMPS FROM ITS PARTNER BOSMAN WATERMANAGEMENT IN THE NETHERLANDS.

These pumps are specifically designed to move huge amounts of water at flow rates of over 650m³/min (650 tonnes per minute) in a proven fish friendly manner that has been approved by the EA and European authorities after extensive testing found less than 1% were impacted after passing through the new custom designed pump.

These pumps are available in a range of sizes from 300mm to 2200mm, to suit all pumpstations and budgets and are already in use in the single largest pumpstation in the UK, St. Germans Pumpstation in Lincolnshire as well as other IDB's in East Anglia.

DXB Pump & Power offer a turnkey solution to customers of these pumps with the supply of the pump, mechanical and electrical installation as well as any small civils that require updating such as concrete pads, load bearing beams for the pumps and small wet wells.

Through our sister company DXB Integrate we offer a full over-pumping capability as well, using environmental engine driven pumpsets or electric pumps wired into the existing pumpstation power supply saving in fuel and emissions if required.

REFURBISHMENT AND UPGRADING

In addition to the supply of complete new pumps, DXB Pump & Power from its 14000sqft operations in the heart of East Anglia is able to offer refurbishment of existing pumps, especially the possible upgrading of older pumps to new fish friendly designs.

Being located close to most IDB's the company uses HIAB trucks up to 100 tonnes to remove existing pumps from their installations and bring them to the factory for a full refurbishment or upgrade. DXB Pump & Power also works with experienced and approved partners to upgrade electrical installations including the supply of new MCC panels and telemetry systems.

DXB Pump & Power is an ISO 9001, ISO 14001 and ISO 45001 approved pump manufacturer that offers a complete range of electric, engine driven and soon, hydrogen powered pump solutions including tested and approved fish friendly pumps complete with a turnkey approach for clients such as IDB's, water companies and national water management organisations around the world.
